

Abstract

A display device for vehicles (a head-up display device for vehicles) includes an indicator 2 emitting display light, and display means 1 for projecting display light L to a projection member. Also included is control means 14 for making the display means 1 display thereon a road shape image indicating the shape of a road in front of a vehicle, and three-dimensional information of the road. As the three-dimensional information, the display means is made to display thereon a height difference index informing a height difference of the road.
